Trustwave Managed Next Generation Firewall

Simplified Management, Increased ROI

Today’s network security solutions must cover geographically disparate areas, require deep product knowledge to configure, and need ongoing monitoring and management as well as physical space for deployment. Trustwave Managed Next Generation Firewall (NGFW) seeks to simplify these challenges.

Trustwave Managed NGFW

Trustwave NGFW offers comprehensive network security with a low total cost of ownership. All hardware costs, maintenance, technology and software updates are included in a single, predictable monthly subscription fee for service and support. No capital expenditure is required.

Flexible hardware form factors fit a variety of use cases. Trustwave NGFW can be deployed either physically or virtually and Trustwave Managed NGFW is compatible across major hypervisor platforms (KVM, Xen, Hyper-V, ESXi) and cloud platforms (AWS/Azure).

The Trustwave Managed NGFW service provides a comprehensive set of capabilities to help protect customers’ networks. Advanced security features include:

- Stateful Firewall
- Virtual Private Networking*
- Intrusion Detection/Intrusion Prevention
- Web & E-mail Anti-Virus
- Web Content Filtering
- Network Access Control
- Internal Vulnerability Scanning
- 4G Cellular backup support

*Not available in Russia

Benefits

- Save space by deploying multiple security technologies in one solution
- Protect yourself against the latest threats with SpiderLabs Threat Intelligence
- Monitored 24x7 by analysts in global Advanced Security Operations Centers (ASOCs)
- Predicable monthly subscription fee covers both service and support

Benefits

- Save space by deploying multiple security technologies in one solution
- Protect yourself against the latest threats with SpiderLabs Threat Intelligence
- Monitored 24x7 by analysts in global Advanced Security Operations Centers (ASOCs)
- Predicable monthly subscription fee covers both service and support
Delivered as a Managed Security Service

Managed NGFW is one of many cybersecurity technologies and services offered by Trustwave. Trustwave NGFW excels in a variety of use cases with varying requirements. Bringing trained cybersecurity experts to the front lines, giving them advanced technology, the including the ability pull in product development to help solve complex problems lets Trustwave simplify your security program and protect you against the latest threats without lengthy turnaround times.

When you purchase the service, Trustwave delivers a NGFW appliance (physical or virtual) and provisions it based on your operational needs and constraints. Once the appliance is installed and the configurations are made, Trustwave tests the device to ensure proper operation. From initialization through the software and hardware lifecycle, Trustwave NGFW is managed by the 24x7 global network of Trustwave ASOCs that are constantly monitoring for threats and new malware.

As a customer, you always have access to your data and the Trustwave team via the Trustwave TrustKeeper® portal where you can view log data, submit change requests, and receive notification of upcoming product improvements and updates.
