

DATA SHEET

Trustwave Cloud Security

► PROTECT CLOUD ENVIRONMENTS AND DATA IN THE CLOUD

Benefits

- Build and maintain an effective cloud security program
- Augment your team with Trustwave experts
- Stop threats from penetrating cloud environments and exfiltrating data
- Detect malicious activity faster
- Leverage SpiderLabs expertise and global threat intelligence

Cloud security is a shared responsibility. Cloud providers are responsible for securing the infrastructure that runs their applications or services. Cloud customers are responsible for securing what they're running and storing in the cloud. If you're moving or planning to move applications and data to the cloud, security needs to be part of your strategy.

Trustwave helps organizations securely navigate their journey to the cloud. Consulting services help organizations design an effective program and deploy technologies. Managed security services ensure ongoing protection. With our flexible service delivery model, organizations can ask Trustwave to be the provider for all their security needs, or to augment existing resources.

Consulting Services

Advisory services focus on the security program, providing guidance on how to build an effective security strategy that organizations can use to protect cloud environments and data in the cloud. Available services include:

- Security and risk assessments
- Strategy and policy development
- Threat and detection workshops
- Sensitive data discovery & classification
- Vulnerability scanning and penetration testing

Transformation services focus on building new security programs, deploying technologies, and maturing your existing security program. They use an iterative approach to provide ongoing tuning and optimization services. Available services include:

- Cloud security program maturity build-out
- Tools deployment
- Tools normalization

Security Technologies

Trustwave security technologies and third-party solutions help prevent threats by focusing on protecting people and assets from the constantly evolving threat landscape. Our set of technologies and services enable organizations to stop threats from penetrating cloud workloads and executing malicious actions. Available and supported technologies include:

- Next Generation Firewall
- Intrusion Detection/Prevention System
- Cloud Access Security Broker
- Endpoint Protection
- Secure Web Gateway
- Secure Email Gateway
- Web Application Firewall
- Database Security

Managed Security Services

Threat Detection, Investigation & Response services help organizations detect, investigate and respond to threats. They focus on detecting malicious activity and tracking cyber-attacks throughout all phases of the attack kill chain. And when needed, quickly and effectively responding to an attack.

All collected events are processed by the Trustwave cloud analysis engine to find known threats, anomalous behavior and suspicious activity. Processing includes stream, batch, and user behavior analytics, as well as, cross referencing event data against SpiderLabs Threat Intelligence for Indicators of Compromise (IOC) and Known Bad Actors. SpiderLabs Threat Intelligence is a curated superset of multiple public and private feeds, maintained by Trustwave SpiderLabs.

Available services include:

- Managed Threat Detection
- Managed Security Information and Event Management (SIEM)
- Managed Detection and Response
- Digital Forensics and Incident Response

Cybersecurity Education

Trustwave delivers specialized cybersecurity training services that will help reduce risk and equip staff with knowledge and tools to protect against and respond to threats in any environment, including cloud.

Available options include:

- Cybersecurity awareness training
- Executive training programs and services
- Tactical training programs and services

Why Trustwave Cloud Security

- **Experienced Security Partner.** Trustwave has helped customers meet security and compliance goals for more than 20 years
- **Flexibility.** Choose whether you want Trustwave to be the security provider for all your cloud needs, or to augment the capabilities you already have. And you choose: on-prem, in the cloud or hybrid operating models.
- **24x7 Threat Monitoring & Detection.** Gain broader visibility into threats and faster breach detection via leading technology and experts who are monitoring and analyzing your security around the clock.
- **Existing Investment Protection.** Leverage Security Technology Management for existing and new deployments that include Trustwave and leading third-party solutions.
- **SpiderLabs Expertise.** Get help from an elite group of researchers, penetration testers and incident responders and benefit from their renowned threat intelligence.
- **Rapid Response.** Gain help when you need it, from having an experienced incident responder start a digital forensics investigation in hours to scheduling a penetration test in the next week.
