Email extends far beyond sending and receiving simple messages and has transformed into a collaboration, transactional, delivery tool and file repository for all types of information. Emails now contain purchase orders, contracts, personal identifiable information, intellectual property, trade secrets, card and banking information and are literally an electronic trail of ‘who said what to whom and when’.

Email archiving preserves and makes searchable all emails to and from every individual mailbox within your business. Archiving captures email content from the email itself in real time, securely stores it on the archive in the cloud not on your mail server, and properly indexes it assuring fast, searchable access to archived emails today, tomorrow and into the future.

And with increasing email volumes and no shortage of regulation on communication and data storage requirements, keeping records of emails is not only a good business practice but also helps protect critical data, meet retention and supervision requirements of applicable regulations and for eDiscovery purposes.

**Trustwave Secure Email Archiving**

Trustwave Email Archiving is an always-on, resilient, multi-tenant email archiving software-as-a service solution that allows on-premise Exchange or Office® 365 and Google G- Suite customers to:

- Keep all email and attachments secure by protecting and controlling access to data
- Meet eDiscovery requirements with fast and accurate searches
- Provide tamper-evident emails that are admissible in court
- Meet industry specific legislation, data privacy and human rights regulations
- Reduce consumption of expensive primary storage by up to 75%
- Improve email search speed by up to 80%
- Migrate from one email platform to another with ease
- Gain almost instantaneous disaster recovery
- Have enough storage to meet the seven-year retention requirement

Trustwave Secure Email Archiving is a central repository to store emails that you no longer need direct access to, which helps users reduce the size of their inboxes ensuring optimal system performance. And it complies with most compliance and data sovereignty rules (EU GDPR, HIPPA, PCI) at a fraction of the per user, per year cost of an E5 license through Microsoft.
